Data Logger Suite is a comprehensive application that enables you to monitor, log and save serial data sent or received via RS232, TCP/IP, UDP, OPC, SQL, SMS, Modem or DDE data interfaces. The program allows you to manage the information, create custom processing filters or store it in the indicated database. Support for parallel data logging Data Logger Suite is capable of analyzing a large series of interfaces at the same time, to extract information and log it accordingly. For example, it natively supports protocols such as RS232, TCP/IP, UDP and OPC, allowing you to work with any of them in a reliable, transparent environment. The program can easily log information received through several of these protocols at the same time. The application supports custom configuration for each port or interface that you select. Moreover, you can log data in real time, in both text and raw binary mode. Effective data acquiring and storage Data Logger Suite allows you to stay up to date with serial data sent or received via the supported devices, by storing the information in a database. You may thus parse real-time notifications of activities, errors and other data. The program can work with Microsoft SQL Server, MySQL, Oracle, Microsoft Access, dBase and other ODBC compatible database, for information storage. Alternatively, Data Logger Suite can export the stored information to an Excel spreadsheet and can filter the data before saving it in either platform. You may configure the program to organize, structure, arrange or format the information so that it can be used in the required environments.
